

# Analysis 3 Exercise 2

David Lang  
07.10.2022

# Outline

1. Serie 1 Review
2. Course Overview
3. Graph, tangent and normal
4. Method of characteristics
5. Examples
6. Tips for Exercise 2

# Outline

## 1. Serie 1 Review

## 2. Course Overview

## 3. Graph, tangent and normal

## 4. Method of characteristics

## 5. Examples

## 6. Tips for Exercise 2

# Gradient, Divergence, Curl and Laplacian

Gradient  
(scalar to vector)

Divergence  
(vector to scalar)

Curl  
(vector to vector)

Laplacian  
(scalar to scalar)

# Serie 1 Review

## 1. Classification of PDEs

- (c)  $(u_{xx} + 1)^3 = x^3 + 2$

## 2. Solutions to ODEs

## 3. Nonexistence of solutions

## 4. Existence of infinite solutions

## 5. Multiple Choice

- (c)  $v := e^u$  &  $\Delta u + \nabla u \cdot \nabla u = 0$
- (d)  $\operatorname{div}(\nabla(u^2)) = u$

## 6. Classification of PDEs

- (c)  $e^{\Delta u} = u$

## 7. Solutions to PDEs

# Outline

1. Serie 1 Review

**2. Course Overview**

3. Graph, tangent and normal

4. Method of characteristics

5. Examples

6. Tips for Exercise 2

# Course Overview

- 1st order PDEs
  - Quasilinear first order PDEs
    - ▶ **Method of characteristics**
    - ▶ Conservation laws
- 2nd order PDEs
  - Hyperbolic PDEs
    - ▶ Wave equation
    - ▶ D'Alembert formula
    - ▶ Separation of variables
  - Parabolic PDEs
    - ▶ Heat equation
    - ▶ Maximum principle
    - ▶ Separation of variables
  - Elliptic PDEs
    - ▶ Laplace equation
    - ▶ Maximum principle
    - ▶ Separation of variables

# Outline

1. Serie 1 Review
2. Course Overview
- 3. Graph, tangent and normal**
4. Method of characteristics
5. Examples
6. Tips for Exercise 2

# Graph, tangent and normal

# Parameterize a curve in 3d

# Outline

1. Serie 1 Review
2. Course Overview
3. Graph, tangent and normal
- 4. Method of characteristics**
5. Examples
6. Tips for Exercise 2

# From Vector Field to ODE

# First-order Equations

We focus on two-dimensional real-valued function:  $u(x, y)$ .

General form for the PDE:  $F(x, y, u, u_x, u_y) = 0$ .

$\text{graph}(u) := (x, y, u(x, y))$  in  $\mathbb{R}^3$

Quasilinear:  $a(x, y, u)u_x + b(x, y, u)u_y = c(x, y, u)$

# Method of characteristics

Results from the last slide:

$\vec{v} = \begin{bmatrix} a \\ b \\ c \end{bmatrix}$  is in the tangent plane of  $u(x, y)$  and is related to the derivative of the  $u(x, y)$ .

Goal: find the points  $(x; y; u) \in S$ , such that  $(a(x; y); b(x; y); c(x; y; u)) \in T_{(x; y; u)}S$ .

# General procedure for Method of characteristics

1. Find  $a, b, c$

2. Find  $\Gamma(s) = \begin{bmatrix} x(0, s) \\ y(0, s) \\ \tilde{u}(0, s) \end{bmatrix}$

i.e.  $u(x, 0) = f(x)$  then  $\Gamma(s) = \begin{bmatrix} s \\ 0 \\ f(s) \end{bmatrix}$

3.  $\begin{cases} \frac{d}{dt}x = a, & x_0 = x(0, s) \\ \frac{d}{dt}y = b, & y_0 = y(0, s) \\ \frac{d}{dt}\tilde{u} = c, & \tilde{u}_0 = u(0, s) \end{cases}$

4. Solve the equations

5. Plug  $s(x, y), t(x, y)$  into  $\tilde{u}(s, t)$ .

# Outline

1. Serie 1 Review
2. Course Overview
3. Graph, tangent and normal
4. Method of characteristics
- 5. Examples**
6. Tips for Exercise 2

## Example 1

$$\begin{cases} x^2 u_x - (y^2 + 1) u_y = x^3 u \\ u(1, y) = 2 \end{cases}$$

## Example 2

$$\begin{cases} u_x + xyu_y = xu \\ u(0, y) = f(y) \end{cases}$$

# Outline

1. Serie 1 Review
2. Course Overview
3. Graph, tangent and normal
4. Method of characteristics
5. Examples
6. Tips for Exercise 2

# Tips for Exercise 2

## 1. Method of characteristics I

- (c) for  $y$  use separation of variables

- (d) 
$$\begin{cases} \frac{dx}{dt} = y \\ \frac{dy}{dt} = -x \end{cases}$$

Differentiate again to uncouple the equations.

## 2. Method of characteristics II

- (b): Is there a way to express  $t$  and  $s$  in terms of  $x$  and  $y$ ?

Why is this the case?

Which of the 3 different cases is it according to the lecture note?

## 3. Multiple Choice

- (c)  $\left(\frac{f}{g}\right)' = (fg^{-1})' = \frac{f'}{g} - \frac{fg'}{g^2}$

## 4. Find a solution

- What is  $x^2 + y^2$  ?
